Ultra High Performance Concrete

Heraclex means Hercules in Italian, and as the exclusive Australian importer of Heraclex concrete mix we are the only Australian company using the strongest concrete available.

It is internationally recognised as an accredited Ultra High Performance Concrete (UHPC), meaning Concrete Republic pieces stand the test of time.

Air Pockets & Veins

All of our pieces are handpacked in a single pour and left to set in a natural state with no touch ups or painting after the pour.

The natural setting process means air and water escape, leaving air pockets and water veins as a feature on the external surface.

It means your piece will be truly unique.

Air pockets vary in size from small pin-holes to 10mm. Veins vary in size & colour from piece to piece but always contribute to the beautiful concrete texture we love.

Surface Variation

Concrete is a natural product and no item will ever be a pure block of colour.

The oxides, cement, water & curing create variation in a natural state. Colour variations are typically minor and contribute to the uniqueness and visually striking item.

Exposed Fibres

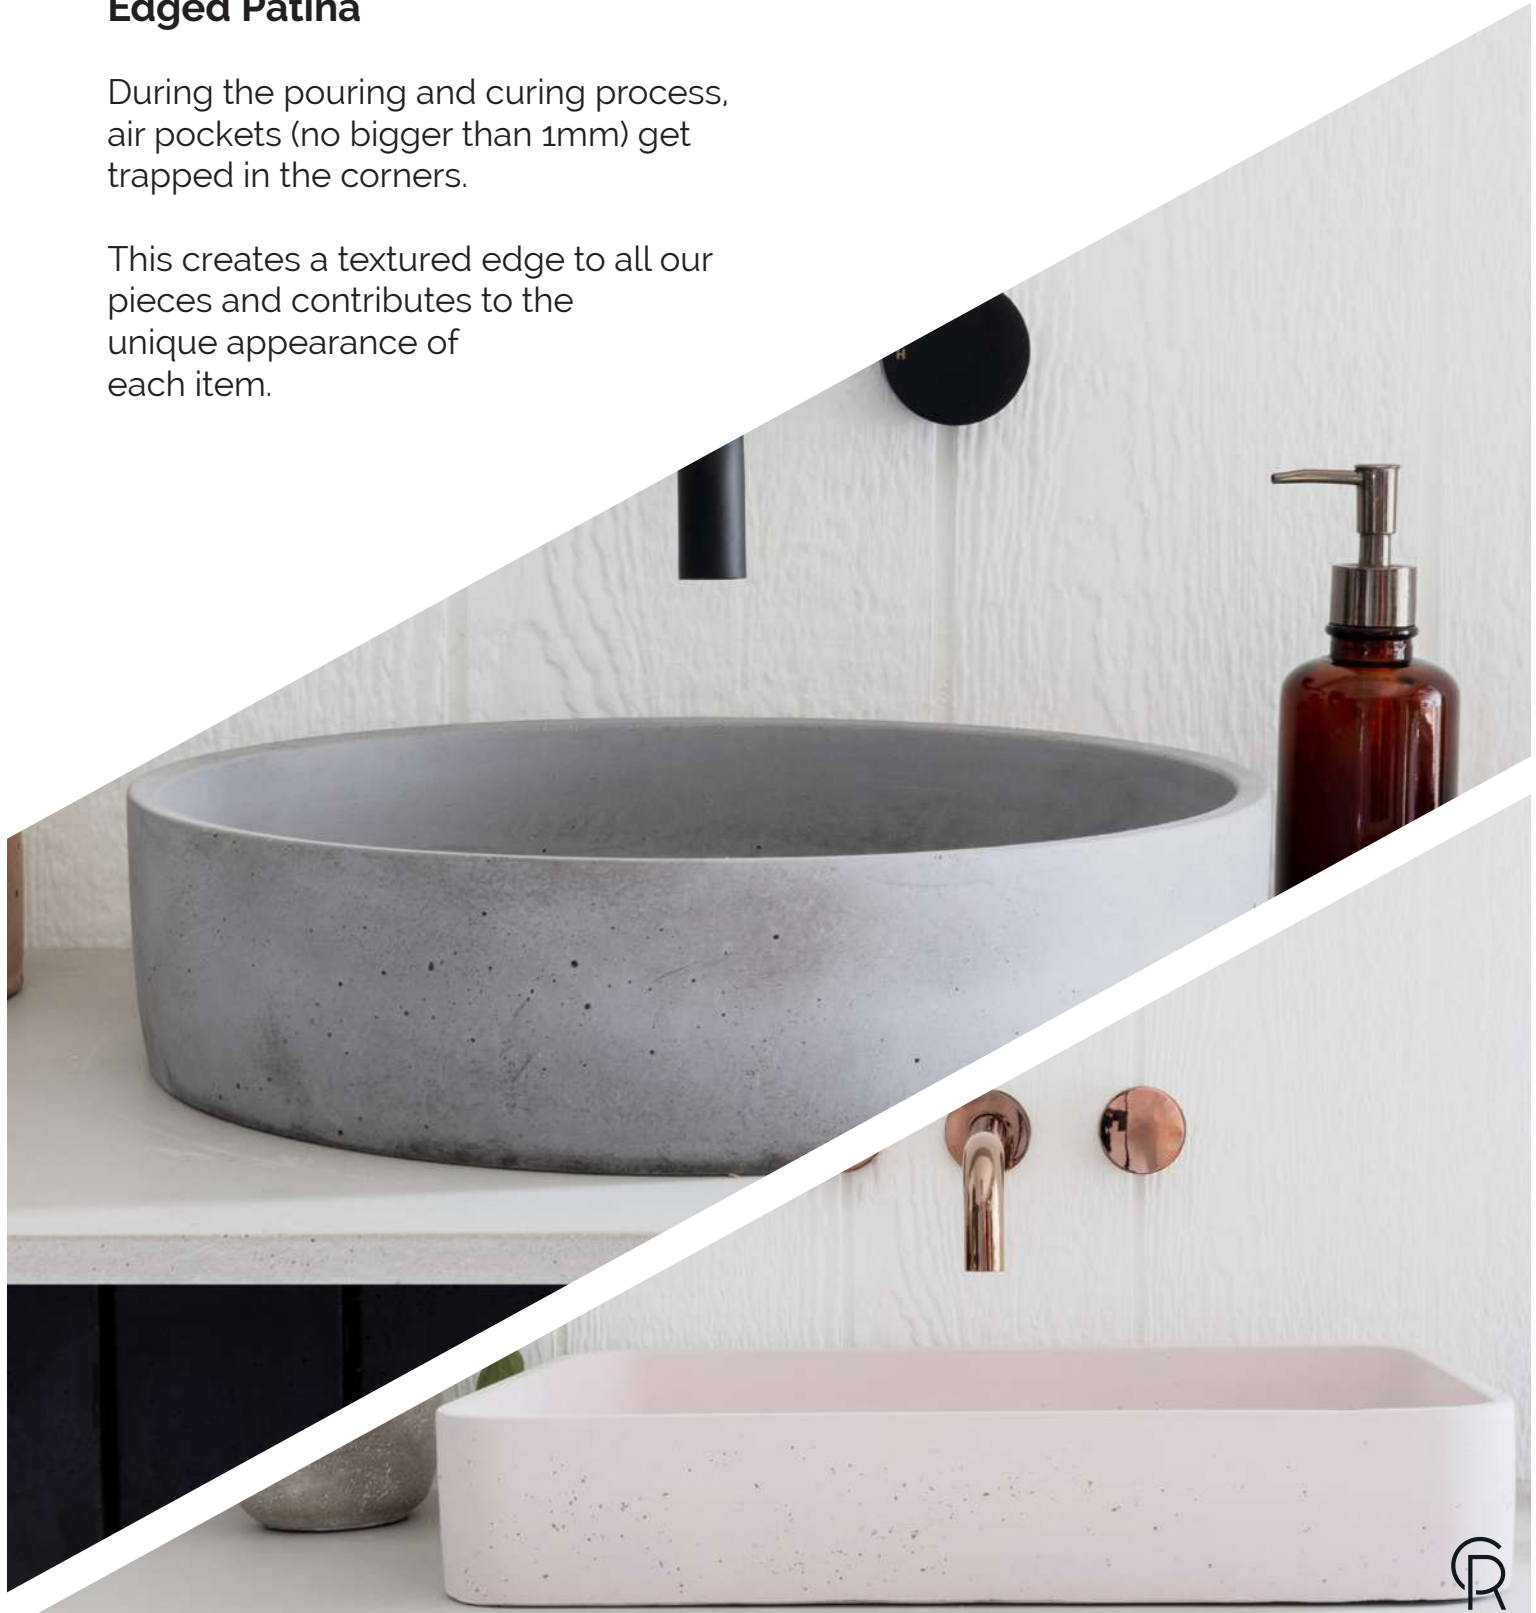

We reinforce every piece with fibreglass strands to ensure maximum strength and longevity.

In rare instances some of these strands may be visible in the finished product, but are typically very low in number and do not subtract from the beauty.

Edged Patina

During the pouring and curing process, air pockets (no bigger than 1mm) get trapped in the corners.

This creates a textured edge to all our pieces and contributes to the unique appearance of each item.
